

MODULO ESPANSIONE DANTE PER AMPLIFICATORI FSD-2150E/2500E

DANTE expansion module

Reference: FSD-22D

DANTE expansion module Features: Expands the possibilities of the FSD-2150E and FSD-2500E PA power amplifiers by making them compatible with other DANTE devices and providing all the advantages that this technology offers. One cable is enough. DANTE eliminates the heavy and expensive analogue cabling, replacing it with a cost-effective and readily available network cable, Cat 5e or Cat 6, preventing interference, noise, and distance limitation while creating an affordable, lightweight and simple solution. It incorporates all multimedia devices and control of the entire system into a single standard IP network. Easily expandable and very versatile as the network can be reconfigured at any time. It has a redundant network port, this avoids loss or interruption of audio in case of connectivity problems in the primary network. Device self-discovery. Applications: Digital audio transfer between DANTE devices. Ideal for large multitrack installations, concerts, live performances, music recording studios, etc. Technical data: 2 input channels and 2 output channels Sampling rate: 44.1 kHz, 48 kHz, 88.2 kHz and 96 kHz Bit depth: 16, 24 and 32 bits Latency: 1 ms

Larghezza	9.600
Altezza	2.000
Profondità	8.800
